EPAC e-Points 3/4/2021

1. Medications on Storyboard Request by many physicians and Advance Practice Providers

If you click on the MEDICATIONS title in the storyboard (Red Box), you will be launched to Meds in Chart Review.

A hover bubble will appear when you hover over Medications area. Clicking the Medications title (Purple Box) in the hover bubble will launch you to Meds & Orders when in an encounter, or to Meds in Chart Review if not in an encounter.

If patient does not have any current outpatient medications it will display as 'None'

- 2. Reducing Drug- Drug Alerts and BPA's Important work is Continuing to improve the Clinical Decision Support provided in the EMR and eliminate unnecessary alerts. Clinical Decision Support Committee shared their work for the Month. They have been doing an amazing job analyzing the system BPA's, Drug-Drug and Drug-Disease alerts and other clinical decision support to improve the experience of our clinical staff.
 - Turn off Alert for Propofol and Ondansetron and Hydroxyzine (Decreases # of alerts by 282 per week)
 - > Retired Multiple BPA's with Duplicative Action, obsolete function or workflow changes
 - Modification of BPA to allow ordering a single dose of insulin without being presented with the BPA to use the Insulin Order set
- 3. Change in InBasket Folders Starting to combine CC'd results with Results folder to decrease the volume of Folders in the InBasket and allow more flexibility with creative solutions for care teams. Epic (Corporate) recommends that the CC'd Results and Results folders be combined. We are one of only a few organizations that still separate these folders. We are starting with the first step in combing the folders. We will discuss finalizing the combined folders in the next few months at EPAC. When CC'ing results, it

is important to only send if the physician/APP needs to see the results to take action or the information is very important to the patient's care. CC'ing routine tests can get in the way of providers ease to view important results that require action.

Here are the changes that Physicians/Advanced Practice Providers will see:

In the following scenarios, providers who previously received a CC'd Result would now receive a Results In Basket message. (The provider was NOT the authorizing provider on the order.)

- 1. CCH Family Health Center physicians will receive Results for any pathology order type result which was ordered by a Resident.
- 2. For currently admitted patients, all non-lab results are sent to the authorizing provider and the "Attending" provider. The attending provider will now receive a Result IB message.
- 3. For any test resulted after the patient has been discharged, the results are sent to the authorizing provider and the PCP. The PCP will now receive a Result IB message.
- 4. In ETC setting, results are sent to the authorizing provider and either a PA or APP pool. The PA's/APP's will now receive Results IB messages.

Dr. Blonski's Results In Basket Folder:

Also contains results in which he is NOT the authorizing provider.

This change also affects nursing staff monitoring pools in the following scenarios. Results IB messages are sent.

- 1. CCH Pediatric Same Day Clinic results for Group B Strep and UA testing ordered per protocol prior to visit.
- 2. CCH OB AFP/Quad and Reproductive Medicine Ultrasound procedures.
- 3. COVID-19 Testing routed to additional users in CCH and Affiliate sites.
- 4. CCH and Affiliate sites with Anticoag Clinics. The pool entered in the Anticoag Episode received a Result IB message.

Next page you find directions on how to find the Authorizing Provider filter for the Results folder in the InBasket.

To find the Authorizing Provider Filer in you InBasket Click on the arrow next to Sort and Filter and select Authorizing provider from the list (Red Circle). From InBasket Card View There is a Filter Button to select Authorizing provider and you can favorite the Authorizing Provider Filter
