AMBULATORY FOCUS

What is in the  
DATA element?

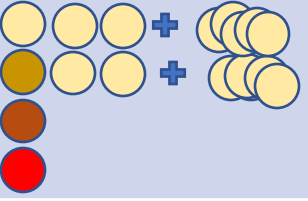

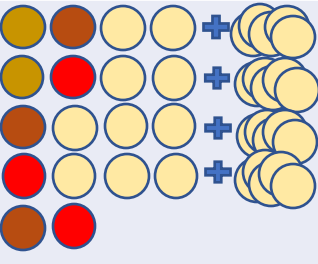

# Medical Decision Making (MDM) Elements

2 of 3 of these elements must be met for the given level!

MDM Level	1. Number and complexity of problems addressed	2. Amount/ complexity of data reviewed	3. Risk	As seen in
Straightforward	Straightforward	Minimal	Minimal	New Patient Level 2 - 99202 Established patient level 2 – 99212
Low complexity	Low/uncomplicated	Limited	Low	New Patient Level 3 - 99203 Established patient level 3 – 99213
Moderate complexity	Moderate/complicated	Moderate	Moderate	New Patient Level 4 - 99204 Established patient level 4 - 99214
High complexity	Severe/threat to life or function	Extensive	High	New Patient Level 5 - 99205 Established patient level 5 - 99215

# Element 2 of MDM: Data Reviewed

A. Tests	MDM Level	2. Data	As seen in
Ordering of each unique test	Straightforward		New Patient Level 2 - 99202 Established patient level 2 – 99212
Review of result of each unique test	Low complexity		New Patient Level 3 - 99203 Established patient level 3 – 99213
Review of prior notes from each unique source	Moderate complexity		New Patient Level 4 - 99204 Established patient level 4 - 99214
<b>B. Information from an independent historian</b>  <b>C. Tests: Next level</b> Independent interpretation of test	High complexity		New Patient Level 5 - 99205 Established patient level 5 – 99215
<b>D. Another provider</b> Discussion of a test result or management plan with another provider (in another specialty)			

## Take homes:

1. Test points (A ) max out
2. Some other data type is required for level 5
3. Data types B , C , D  are highly impactful
4. **Use the smartlist to get credit for the work you do**

Unpack some of those  
data points

# Review and summarize records

- In the clinic, credit for review and **summarize** of records from each unique source:
  - Of an external health care system
  - **NEW: Of a external specialty (even within the same system)**
- Must summarize

Review of prior external notes, each\* - \_\_\_\_\_ x1

# Independent historian

- Explicitly state who helped
- An individual (eg, parent, guardian, surrogate, spouse, witness) who provides a history in addition to a history provided by the patient who is unable to provide a complete or reliable history (eg, due to developmental stage, dementia, or psychosis) or because a confirmatory history is judged to be necessary

New in this regulation:  
Interviewing a parent for  
a pediatric visit counts

# Test order and review

(subject to adjusted interpretation)

- It is indeed *explicitly separate* to order a test and review a test
  - Seems odd: In general E&M does not allow "double dip"
- Current interpretation:
  - Ordering tests means carrying it all the way through including to reviewing result
  - Considering review separately means giving you credit for reviewing a test someone else ordered (like a cardiology visit, ER visit, another health system etc)

## **Amount and/or Complexity of Data to be Reviewed**

*\*Each unique test, that has its own CPT code.*

**Tests ordered and resulted on date of E/M – only one point allowed (review is inclusive of the order)**

# Test order and review

(subject to adjusted interpretation)

- A single test is a single test no matter how many result components
  - A chem-8 is one test, not 8
  - A CT coronary angiography is one test, not 2 even though there is an angiographic and a routine radiologic interpretation
- No longer max out in each category of test (lab, radiology, diagnostic) as previously

OFFICE/OUTPATIENT	E&M DOCUMENTATION GUIDELINES		Compliance 2021
CPT CODES	NUMBER/COMPLEXITY OF PROBLEMS	RISK	AMOUNT/COMPLEXITY OF DATA REVIEWED <i>*Each unique test/note counts toward # needed</i>

# Test personal interpretation

(subject to adjusted interpretation)

- Interpretation of a test for which there is a CPT code and interpretation/report is expected.
- You cannot double dip: This does not apply when ***the provider*** is reporting the service or has previously reported the service for the patient.
- Use for tests performed by another healthcare provider ***external to you/your group where you added something unique to the story***

## Note:

- Simply looking at a test  $\neq$  ***interpretation***
