1. High Tech imaging Clinical Decision Support will be removed for all Ultrasound studies

Why can we remove ultrasounds from High tech clinical decision support ? Physicians and Advanced practice providers are choosing appropriate indications for these studies and CMS will not be requiring the Decision support for ultrasound studies.

The image shows two screenshots of a medical software interface. The top screenshot is titled "Outpatient current view:" and shows a form for a "US Abdomen Complete" study. The form includes fields for Priority (Routine, Routine, Patient Waiting, STAT), Class (Radiology, Radiology, External Referral, CDI), Status (Normal, Standing, Future), Expected Date (4/28/2021), Expires (5/26/2022), and Reason for Exam. The bottom screenshot is titled "Outpatient updated view:" and shows the same form after updates. The Status is now "Future" and the Expected Date is 4/27/2021. Both screenshots have "Accept" and "Cancel" buttons.

2. Well Child Note Changes

- **Create a Standardized Workflow using Make me the Author Functionality Advantages** Consistent workflow and a single note. The note has been optimized to remove duplicative work prior to this change.
- **Closed Visit Validation Hearing and Vision:** Documenting in a Well Child Visit if either the Hearing or Vision Screen (for children ages 3 years and up) have been declined or attempted, but unable to complete, qualifies the visit for the additional S0302 code. To improve the revenue stream, a **hard-stop close visit validation point is requested to assure complete documentation for Hearing and Vision Screens.**

The image shows a screenshot of a software interface with two red error messages. The first message says "Required Vision Screen Flowsheet has not been completed for this visit. Vision Interpretation". The second message says "Required Hearing Flowsheet hasn't been completed for this visit. Interpretation".

The user can click on the verbiage, which is a hyperlink, and be launched directly to the interpretation row for the affected flowsheet in the flowsheet activity view. (Not in the navigator section view.)

3. Multiple Enhancements for Surgeons Tip Sheets for activities attached Optional required tools to help drive down surgery supply/implant costs.
